

Uniaxial Positive Indicatrix

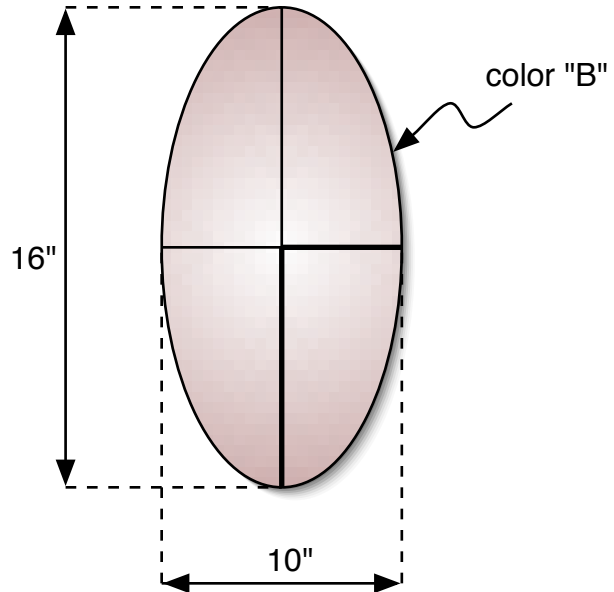

Perspective view

Top view

Front & Side views

Object is made up of three intersecting planes of plastic., preferably within a clear plastic ellipsoidal "shell". Each plane is a pale color, and the shell is clear. The two elongate planes are one color, and the circular plane is a different color.

In each of the three principal directions is a rod the color (more or less) of the plane it is perpendicular to, although the color can be brighter. The rods do not completely cross the object, but come out in three directions from the center.
